

As a professional company, we strive to offer the best **monitoring** service and training to our clients in the field of fallout dust monitoring.

With many years of experience and expertise, we provide **services and training** at very competitive prices.

Our mission is to provide applicable and relevant information, services, **equipment**, and products in the area of fallout dust monitoring.

Our **Occupational Hygiene** training course runs in the first and third week of each month. Our fall-out monitoring equipment training material is included in this **Occupational Hygiene training course**, but the training can also be attended independently, if this is required, as stand-alone training.

We supply **Buchner funnel laboratory equipment** designed specifically for use with the fall-out dust monitoring program and equipment. This laboratory equipment is durable and cost-effective. We do not sell the Buchner equipment separately but supply it as part of our dust monitoring equipment system.

OUR MISSION

Our mission is to provide applicable and relevant information, services, and products, pertaining to fall-out dust and **dustfall monitoring equipment**.

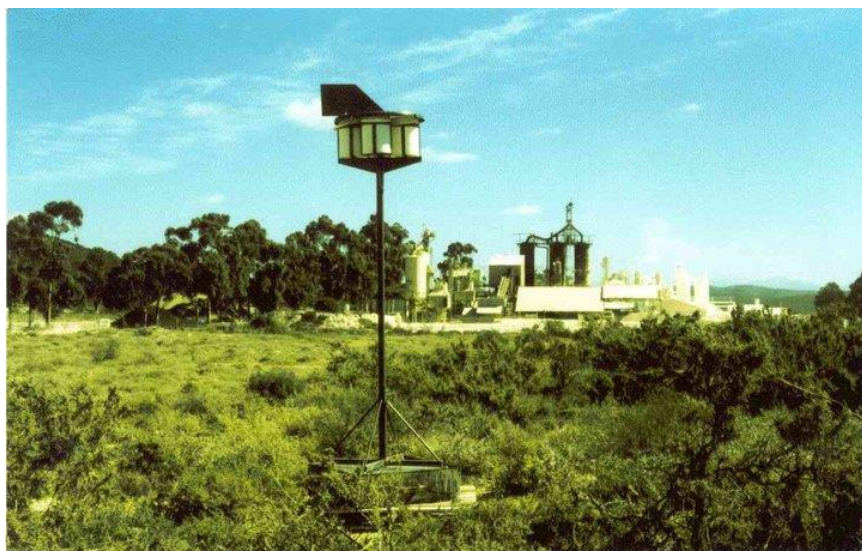

The company – [DustWatch CC](#) – commenced operations in June 2008, in Piketberg in the Swartland, **Western Cape** as an operation ideally suited to service mining and industrial concerns in the Cape West Coast and Swartland areas.

Expansion of the operation into Namaqualand, Bushmanland, Botswana, and Namibia has become a natural extension to the original target area and the client base extended to the entire country as well as the neighbouring countries. A **Cape Town branch** of DustWatch was opened in 2010.

The supply of our **patented DustWatch fall-out dust monitoring equipment**, assessment facilities, and a full **in-house laboratory** service provides service throughout South Africa, Namibia, Zambia, Malawi, and Botswana. **DustWatch CC** controls sales of the units and systems, the servicing of client requirements, dust monitoring training, assessments, and dust monitoring programs, in addition to the operation of an assessment laboratory servicing a **countrywide client base**.
